

Flying Cocaine Salmon Reward Layer (\$FCSRL)

Dual-Token Holder Utility System

Executive Summary

The Flying Cocaine Salmon Reward Layer (\$FCSRL) introduces a dual-token reward and deflation system that rewards committed holders of both \$FCS and \$FCSRL with automated SOL distributions while creating ongoing buy pressure and burns on the original \$FCS token.

Qualified holders receive SOL rewards every 120 minutes from creator fees, while 20% of fees are used to buy and burn \$FCS. The system scales qualification thresholds downward as market cap grows, keeping participation accessible while maintaining meaningful holder alignment.

Core Value Propositions

- Automated SOL rewards paid directly to qualified wallets every 2 hours
- Continuous deflationary pressure on \$FCS through automated buy-and-burn
- Retained cashback from the original \$FCS contract
- Dynamic qualification thresholds that become more accessible as the project grows

The Vision

Flying Cocaine Salmon launched as a high-energy meme coin with built-in cashback. The Reward Layer represents the next phase: a utility system that connects both tokens in a self-reinforcing cycle.

Holders who show conviction by maintaining positions in both tokens are directly compensated in SOL while simultaneously strengthening \$FCS scarcity.

How the Reward Layer Works

Dual-Token Qualification

To receive rewards, a wallet must hold the minimum of both tokens at each distribution snapshot:

- \$FCSRL: Minimum threshold (starts at 1,000,000)
- \$FCS: Minimum 1,000,000 tokens

Dynamic Threshold Scaling

Launch → 100k: 1,000,000

100k+: 500,000

250k+: 250,000

500k+: 100,000

Permanent floor: 50,000

120-Minute Reward Cycles

1. Fee Collection in secure Dev Wallet
2. Activation once ≥ 0.8 SOL accumulated
3. Fee Split: 80% rewards / 20% buy-and-burn
4. Distribution directly to qualified wallets

Token Utility & Synergy

\$FCSRL powers the Reward Layer and generates fees that become SOL rewards and burns.

\$FCS receives ongoing buy pressure and token burns.

Combined Holder Experience:

- Cashback from original \$FCS contract
- SOL rewards from \$FCSRL
- Deflationary pressure on \$FCS

Technical Architecture

Blockchain: Solana

On-Chain: SPL tokens + custom Anchor program

Off-Chain: Node.js automation bot with Jupiter integration

Security: Recommended multisig Dev Wallet

Transparency: All buys, burns, and distributions are publicly auditable

Benefits

For Qualified Dual Holders

- Passive SOL income every 2 hours
- Continued \$FCS cashback
- Increased value through regular burns

For the Ecosystem

- Consistent buy pressure
- Deflationary mechanics
- Stronger holder alignment

Conclusion

The Flying Cocaine Salmon Reward Layer is designed as a utility flywheel that rewards conviction, creates deflation, and delivers real SOL to participating holders.

The salmon is flying higher than ever.
